Skills

Languages: Python, Rust, C, JavaScript, Java (foundational), SQL

AI/ML & GenAI: PyTorch, TensorFlow, scikit-learn, OpenCV, LLMs, VLLMs, Prompt Engineering, Token/Prompt Compression

Backend & Cloud-Native: REST APIs, Microservices, Docker, AWS EC2, Nginx, Node.js, MongoDB, Linux, Git

Security: Secure Coding, Authentication, SSL/TLS, Intrusion Detection, Anomaly Detection, Network Security, Zero Trust Basics

Testing & Ops: Unit & Integration Testing, Root-Cause Analysis, Log Analysis, Monitoring & Observability

Work Experience

HDFC Life, Bangalore Aug 2025 - Oct 2025

AI Engineer Intern

- Built Python machine-learning pipelines to extract visual features from selfie images for automated user profiling.
- Applied vision-capable large language models (VLLMs) to infer age, gender, and region; achieved MAE of ~5 years and 99.5% accuracy on age classification.
- Deployed and debugged containerized workloads using Docker on AWS EC2 in a production-like environment; performed root-cause analysis on inference and pipeline failures.

Projects

- **Tokelang** — tokelang.com (**Patent Published, IPA App. No. 202541096177**): Token-efficient intermediary language for LLMs, built ~90% in Rust (self-taught from scratch in a few weeks to ship it). Delivered up to **75% token reduction** and cut API response latency from 50 ms to 9.8 ms avg; wrote unit and integration tests. Open-sourced a **Claude Code skill** and the Tokelang Lite engine that bring prompt-level compression into GenAI coding co-pilot workflows. Currently in discussions with a startup for enterprise-scale deployment to reduce LLM inference costs.
- **IDS with ML — AI-Driven Cybersecurity (2025), Published (IEEE)**: Built an Intrusion Detection System using a CNN for feature extraction and a Random Forest classifier, trained and evaluated on the CIC-IDS and NSL-KDD datasets; added an active-learning loop for adaptive threat classification. Work published in an IEEE conference.
- **Self-Hosted Infrastructure & Deployment (2025-Present)**: Run production services (including the Tokelang stack) on a TrueNAS server; exposed them securely without a static IP or port forwarding via a Cloudflare Tunnel. Deployed with Docker, Nginx reverse proxy, and HTTPS (Certbot SSL/TLS). Built a self-hosted SMTP messaging stack (Postfix + Dovecot) and resolved blocked port 25 using a Brevo relay. Handles monitoring, log analysis, and root-cause debugging across DNS, TLS, and routing.

Awards and Certifications

- **RVCE Pitch-It Ideathon — 1st Place (2025)**: Token-optimization system built on Tokelang, benchmarking compression ratios, latency gains, and task accuracy to cut LLM inference cost without loss of output quality.
- **Presidency University InnovateX Pitchathon — 2nd Place (2026)**
- **RVITM IPR Conclave — 2nd Place**
- **CloudSEK Quantum Breach Hackathon — 3rd Place (2025)**: AI threat detection using an Isolation Forest model for Remote Access Trojan (RAT) anomaly detection in network traffic, plus an OSINT scraper for early-warning signals.
- **IBM EcoEquify Hackathon — 3rd Place (2023)**: ML model detecting industrial pollution via anomalies in pH, turbidity, and TDS. [Dashboard](#).
- **Certifications**: IBM AI Developer (AI/ML/Deep Learning Specialization); ServiceNow CSA & CAD; CIL soft-skills (communication, teamwork, problem solving).

Education

Dayananda Sagar Academy of Technology and Management

B.E. in Computer Science and Engineering (IoT, Cyber Security, Blockchain)

Relevant Coursework: OOP, DBMS, DSA, Operating Systems, Computer Networks, Machine Learning, AI

2022-2026

CGPA: 8.4/10

Leadership

- **Head, Cyber Security Club — Oculus Aegis, DSATM (2025-2026)**: Founding member; created and ran technical and non-technical events for the department club.
